My experience of ASNR 2023

First of all, I want to express my sincere appreciation for the travel grant made possible by the World Federation of Neuroradiology Societies (WFNRS) that allowed me to attend the 2023 American Society of Neuroradiology (ASNR) annual meeting in Chicago. It was an incredibly enriching experience that I will always cherish.

The conference was a wonderful opportunity to learn from leading experts in the field of neuroradiology, and it was amazing to meet the experts in real life that I have been citing in my own papers. During the symposium, I was especially impressed by new possibilities presented to improve education, such as teaching in tweeting and educational trainings on donors. Furthermore, the Neurorad Password Game Show was enthralling, educative, and a lot of fun. During the annual meeting, I was impressed by the variety of topics covered, the quality of the presentations, and the insightful new research which has been presented. The enthusiasm of presenters about their own topic is amazing and inspiring to see. Moreover, I was able to view the state of the art technologies in the exhibitors hall. It is incredible to see the new possibilities with artificial intelligence, and mobile CT and MRI scans. I am really excited about what the future of neuroradiology holds.

I was fortunate to present two of my latest research works at ASNR 2023, which focused on blood brain-barrier disruption after endovascular treatment in acute ischemic stroke patients. The interactive discussions with experts afterward are incredibly meaningful. I believe that the insights gained from these discussions will be valuable in furthering my research.

My attendance at this annual meeting could not have been possible without the travel grant from the WFNRS. It was an honor to meet the highly esteemed Dr. Wan-Yuo, the president of the WFNRS. I am certain that the knowledge and experience gained from my participation of the ASNR annual meeting will continue to my professional development going forward. Therefore, I would like to reiterate my sincerest appreciation once again to all those who made this travel grant possible.
